

TL;DR

- 50-50 training split for tuning is best.
- Training with a balanced class distribution is probably a good idea.
- Validation with a balanced class distribution may also be a good idea.
- An imbalanced test set can skew metrics.

Tuning "Strategy" Comparison

ratio	auc	youden_j	best_bnp_log	best_bnp	weighted_f1
50-50	0.79	0.44	3.012	1028.7	0.98
75-25	0.77	0.43	3.012	1028.7	0.96
zero-shot	0.76	0.39	2.826	669.7	0.88
